Professional Profile

I'm a multidisciplinary IT expert with over a decade of experience in Systems Administration, Full-Stack Development, and Database Management — always with a DevOps mindset. I've also worked with Web3, Cloud Computing, Cybersecurity, and more recently, I've deeply explored Artificial Intelligence. My career has evolved from hands-on technical work to leading large-scale technology projects at MercadoLibre, one of Latin America's top tech companies.

I specialize in designing resilient infrastructures, building high-performance software systems, and solving complex problems through smart, forward-thinking solutions. Whether it's automating cloud deployments, optimizing distributed systems, or integrating AI into real-world applications, I love making technology run smoothly and efficiently.

I'm passionate about learning emerging technologies and constantly exploring new ways to push boundaries, improve scalability, and create real impact. If you're looking for someone who combines deep technical expertise with a creative problem-solving mindset — let's build something extraordinary together.

Key Achievements

- ❖ Automated cloud deployments and operations using Terraform, Docker and Kubernetes, reducing delivery times by ~40%.
- ❖ Developed “as a wizard,” a Cloud Infrastructure Orchestrator designed to provide these resources company-wide — even for non-technical users.
- ❖ Led development teams of up to five people, including three mid-level developers.

Skills

Development: Node.js, JavaScript, React.js, TypeScript, Python, Flask, Bash, SQL

Cloud: AWS (S3, EBS, EC2, IAM, Glacier)

Databases:

MySQL, Amazon Aurora, DocumentDB, MongoDB.

Familiar with concepts and operations patterns (backup/restore, HA, indexing, troubleshooting) transferable to SAP HANA/DB2/MSSQL environments

Infrastructure & DevOps: Terraform, Kubernetes, Docker

Tooling: Github, Jira, Trello, Looker

Blockchain: Solidity, [Ethers.js](#), Web3 lib, Tokenomics build, IPFS

Experience

MercadoLibre, December 2017 - March 2025

Since this represents my primary professional experience, I will present it by outlining the different positions I held within the company, allowing for a more detailed description of the responsibilities and skills developed in each role.

Cybersecurity Engineer, March 2023 - March 2025

My **responsibilities** were focused on leading corporate-level initiatives in **automation**, **monitoring**, and **technology risk analysis**. Key contributions included:

- **Led** a development team responsible for building and maintaining an internal IT risk management tool used across multiple business units to prioritize and mitigate vulnerabilities.
- Designed and implemented proactive automation solutions capable of detecting potential threats across systems and infrastructure before impact.
- Developed and maintained security **dashboards centralizing key metrics** and system health indicators to enhance **visibility** and decision-making.
- Planned and coordinated **agile sprints**, ensuring alignment between technical deliverables and strategic business objectives.
- Defined core security metrics and prepared **executive-level reports** for C-suite stakeholders, supporting informed, data-driven decision-making.

Key Skills & Tools:

- Research and validation of reliable **threat detection sources**
- **Data structuring** and **normalization** from multiple inputs
- Translation of technical findings into **quantified alert-level scoring models**
- **Looker** (dashboard development and data visualization)
- **Database views** and advanced **SQL querying** (medium to high complexity)
- **Jira** (project management and workflow optimization)
- Automation development leveraging **Jira APIs**
- **OKR**-based objective definition and strategic planning

Cloud Computing Engineer, February 2020 - March 2023

Senior Cloud Systems Engineer responsible for **leading** the design and **implementation** of distributed application **architectures**, with a strong focus on high availability, security, scalability, and operational excellence.

Key Responsibilities:

- Provided **operational support** and technical guidance to teams with limited cloud expertise, ensuring stable and secure environments.
- Designed advanced **application architectures** incorporating **redundancy**, **resilience**, and load balancing strategies.
- Developed and deployed complex applications with multiple **internal and external integrations**.
- Ensured **compliance** with **security** standards and best practices throughout the entire software development lifecycle.
- **Mentored** junior engineers, promoting cloud best practices and sound engineering principles.

- **Led sprint planning** and technical coordination within small cross-functional teams.

Key Achievement:

Led and actively contributed to the development of an internal infrastructure orchestration platform featuring a wizard-style interface. The solution simplified cloud environment provisioning for non-technical users, effectively democratizing access to cloud capabilities across the organization.

Key Skills & Tools:

- **Linux ops:** systemd, **cron jobs**, **SSH-based debugging**, log analysis, **networking troubleshooting** (dig/nslookup/netstat/ss).
- **VPC** configurations to connect / achieve **cloud or on-premises networks**
- Design of highly available and resilient system **architectures**.
- **Bash** and **Python** scripting for **Kubernetes** deployments, cloud server **resource monitoring** (CPU, memory, disk), **backups**, and **log parsing**.
- **Amazon S3:** bucket **policies** (public/private), **lifecycle/retention**, static websites, log pipelines.
- **Amazon EBS** administration: **snapshots**, **encryption** (KMS), orphaned/shared **volume management**, and **lifecycle policy** configuration.
- **AWS Glacier** for long-term archival storage (e.g., legacy OS ISOs, historical logs).
- **Relational database management (MySQL):** schema design and modifications, query development, views, dumps, troubleshooting, backups, and high-availability configuration.
- **NoSQL database management** using **AWS DocumentDB** (via **MongoDB Atlas**): provisioning, configuration, querying, and maintenance.
- **AWS Lambda** scripting for lightweight automation tasks and isolated serverless processes.

Devtools Systems Analyst, February 2019 - February 2020

Strong focus on full-stack development and internal process automation.

Key Responsibilities:

- Developed web applications and **APIs** using **Python**, **Node.js**, and **React.js**
- Designed and implemented small-scale **API architectures** to enable integration between **internal services**.
- Administered and optimized **MySQL databases**, including backups/dumps, HA support, and performance troubleshooting.
- Implemented and managed CI/CD pipelines using Jenkins and Docker to enable automated deployments.
- Monitored production application health and provided second-level support for critical incidents.

Key Achievement:

Took part in developing an **internal self-service** and **automation web portal**. The platform significantly reduced operational workload for support teams and improved incident resolution times for internal stakeholders.

Key Skills & Tools:

- **Backend and frontend development** using **Node.js** and **React.js**.
- Relational database modeling and schema design (**MySQL**).
- Containerization of third-party and in-house applications using **Docker**.
- **Bash scripting** for automation tasks, including printer installation, device enrollment, compliance validation, and software deployment.

This role marked a pivotal transition from technical support to software development, combining infrastructure knowledge, automation capabilities, and programming expertise.

Technical Support Analyst

Providing comprehensive support to **internal collaborators** across **macOS** and **Windows** environments within a high-demand, business-critical setting. Also responsible for supporting **Linux servers** and ensuring operational continuity.

My primary objective was to deliver a stable and secure working environment by resolving incidents with strong technical judgment, effective prioritization, and clear communication.

Key Responsibilities:

- Conducted **troubleshooting of connectivity and networking issues** affecting end-user devices and office infrastructure (Wi-Fi, LAN, switches, access points), as well as the **underlying Linux servers** providing these services.
- Focused on root cause analysis to eliminate recurring issues and improve long-term stability.
- Implemented **automation** and **monitoring** initiatives to assess the “health status” of corporate laptops (alerts, preventive checks, reporting), enabling **proactive failure detection** and improved response times.
- Contributed to the **deployment** and setup of network connectivity for new office locations, coordinating installation and validation to ensure performance and reliability from day one.

Key Skills & Tools:

- Managed **Linux services** supporting **office infrastructure** (network services, logs, incident response).
- **Bash scripting** for automation, **monitoring**, **system maintenance**, **task orchestration** and **patching**.
- **Troubleshooting of network services** hosted on Linux environments.
- Preventive **monitoring** and **alerting** implementation.
- Root cause analysis and incident **lifecycle management**.
- **macOS** and **Windows enterprise** support.

FreeLance | Web Scraping, March 2015 - November 2015

Development of **Python** and **PHP parsers** to **extract structured information from websites** for a Spanish employer. These parsers extracted the most important data from each page. Extracting the data required a strong command of **HTML**.

Key Skills & Tools:

- **Python** and **PHP** programming language concepts.
- Deep **HTML** knowledge and its different tags.
- In-depth knowledge of **CSS**.

K2B | Developer, November 2015 - December 2017

Here, I carried out purely development-focused tasks with outstanding performance. Development in GeneXus, deploying in a Java environment for ERP solutions.

Key Skills & Tools:

- **Genexus** language and structures.
- **Java** programming language concepts.

- **Apache Tomcat** web servers deployment.

Personal Projects

Apes of Empires

Roles: Infrastructure, Development, User Support, Analyst

2021 - 2022

Web3 game developed with **Node.js** and **React.js**, integrated with **Solidity** smart contracts. In this project, I played a leading role in developing the **frontend, backend, deployment, and managing the associated infrastructure**, as well as in the development of the Solidity contracts.

Additionally, I contributed to the creation of the **tokenomics, documentation, launch**, and the initial capital raising to bring the token to life (including **liquidity pair setup**, among other tasks).

Cryptocurrency Trading Measurement and Monitoring Tools

Roles: Dev, Analyst

2025

Recently, I've ventured into **crypto trading**, primarily using **Binance**. To **measure, monitor**, and even **automate** certain workflows, I've developed my own tools by leveraging Binance's **APIs, SDKs, and data streams**.

Cambiofigus (<https://cambiofigus.com.uy/>)

Roles: Development, Infrastructure, Analyst, Marketing

2025

Collectibles Exchange and Virtual Album Platform (100% **AI-Driven**).

Independently developed a **web platform** focused on the **exchange of digital collectibles**, incorporating **virtual album** functionalities. This recent project allowed me to fully apply the skills acquired through **Vibe Coding**, while leveraging **artificial intelligence to optimize core processes**, service configuration, and vendor research.

The infrastructure was orchestrated using **Railway** (for backend, frontend, and database), with **Cloudflare** as the CDN, and **Zoho Mail** for business email management. Additionally, I implemented and configured **Google AdSense, Google Analytics, and Search Console** to enable monetization and site performance tracking, achieving high visibility in Google search results through effective **SEO** strategies.

Studies

- Corazón de María School: Primary Education
- Santa María School: Secondary Education
- Computer Science Foundation: Technical High School Diploma in Computer Science
- Faculty of Engineering – UDELAR: 2010 – 2019
